DETAILED ACTION

Allowable Subject Matter

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to the independent claim 1, prior art fails to disclose or make obvious, in combination with other recited features of the claim limitations, a scanning electron microscope, comprising: an electrode which is located under an objective lens, and to which a voltage can be applied independently, and a sample stage which is located under said electrode, and to which a voltage can be applied independently, said sample stage being used for mounting a sample thereon, wherein said sample is set up between said electrode and said sample stage such that an arbitrary equipotential surface and the surface of said sample coincide with each other, said arbitrary equipotential surface being formed by a parallel electric potential, said parallel electric potential being generated between said electrode and said sample stage by applying each of said voltages to said electrode and said sample stage.

The key element of the applicant's invention, not disclosed in prior art but present in the independent claim 1, is that the sample is set up between said electrode and said sample stage such that an arbitrary equipotential surface and the surface of said sample coincide with each other, said arbitrary equipotential surface being formed by a parallel electric potential, said parallel electric potential being generated between said electrode and said sample stage by applying each of said voltages to said electrode and said sample stage.

The dependent claims 2-15 are allowable by virtue of their dependence upon the independent claim 1.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shoji et al. (2008/0121803 A1) disclose a charged particle beam apparatus for acquiring high-definition observation images using a sample stage located under an objective lens and a focusing electrode. Both Scholtz et al. (6,972,412 B2) and Nagahama et al. (2007/0194232 A1) disclose a substrate inspection apparatus, wherein a primary electron beam irradiates a substrate located on a sample stage, and wherein an electron detection unit detects the secondary electrons, reflected electrons, and back scattered electrons generated from the surface of the substrate.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nikita Wells whose telephone number is (571) 272-2484. The examiner can normally be reached on 8:30 AM - 5:00 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571) 272-2293. The central fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
